Professional Summary

Junior software engineering student in the Bachelor's Degree in Information Technology at the Technological University of Uruguay (UTEC), having completed four semesters of the program. Strong academic foundation in programming, backend and web development, databases and systems concepts, with hands-on experience through multiple university projects.

Highly motivated to grow as a software engineer by working close to data, systems, and large-scale technical challenges in a remote engineering-driven environment.

Technical Skills

Java, Spring Boot, REST APIs · JavaScript, TypeScript, React, Vite · Git

---

Projects

Full-Stack Web Application — University Project

- Designed and developed a full-stack web application as part of an academic project.
- Implemented a RESTful backend using **Java and Spring Boot**, managing business logic and data persistence.
- Designed and worked with a **PostgreSQL** relational database schema.
- Developed the frontend using **React, Vite, JavaScript, and TypeScript**, integrating it with backend APIs.
- Applied software engineering practices such as requirements analysis, testing, and iterative development.
